SOFTWARE'S FOR FREE INTERNET BROWSING ON YOUR PC

1. INDIAN WEB PROXY
2. PRIVOXY
3. PRIMOLITION
4. YOUR FREEDOM
5. BLUMBERG

Unblock the whole WEB by IWP - No. 1 proxy . Start browsing with High speed right now for free!

INDIAN WEB PROXY: Indian web proxy is a proxy surfer used to browse the net anonymously without detecting your location, this software works with USA ip and with this software on your pc you can access restricted sites without delay.

HOW DO ONE CONFIGURE IWP FOR FREE BROWSING

Download the latest version of Indian web proxy software from www.web-tunnel.com/download.php

Step By Step 2 minutes procedure how to run :: ~ :: Method 2

1. Open <http://web-tunnel.com/reg.php> register for a free account. You should receive a mail containing user id /password within 5 minutes.

If it is not received pls check your Junk mail box otherwise please mail us immediately : sky.webtunnel@gmail.com -Mention you **Country** and **network** while send mail to us.

2. Download JAVA from here [[Java 5 download](#) .] and install it in you PC. If you do not have java 5 or above in you machine.

3. Download IWP3.3 from here <http://web-tunnel.com/download/IWP3.3.zip> and Unzip it.

4. For 32 bit windows install *Microsoft Visual C++ 2005 Redistributable Package (x86)* .[You can install it from here.](#)

5. Run "IWPCore3.exe" by double-click - **Don't close it. NB: run "IWPCore3.exe"** if you want to use multilink's or Etisalat only otherwise leave it.

6. Run **SkyWebTunnel-3.3.jar** inside it by double click.

How to run the IWP?

INSTALL CERTIFICATE BEFORE RUNNING.

Reason for installing certificate, without you installing the certificate each time you open secured site like yahoo mail, Gmail, liberty reserve a message will pop up on your browser that the site is untrusted that you should add exceptions

HOW DO I INSTALL CERTIFICATE?

Locate the Indian web folder then look for the file "ca_web-tunnel" install it, after installation open your browser e.g Mozilla click on tools ----option----Encryption---view certificate---import a box will popup then locate where you have then Indian web proxy software and import the "ca_web-tunnel" file.

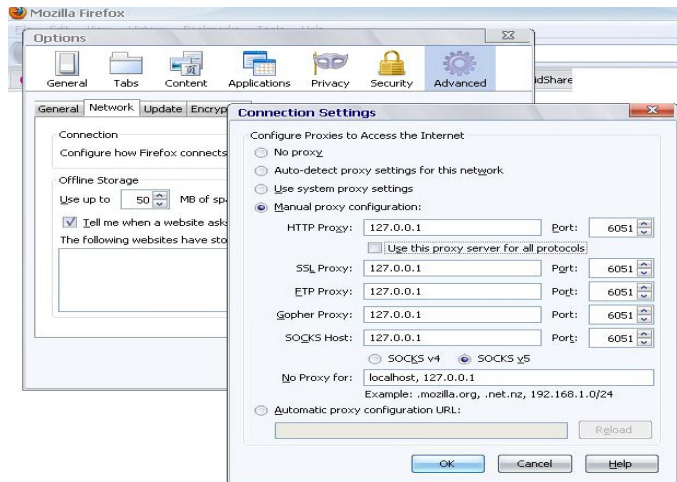

NB: 3 boxes will come up mark all of them then ok.

HOW TO CONFIGURE MY BROWSER EXAMPLE FIREFOX

Now point your favorite client program to port 6051 and host 127.0.0.1 i.e. your Browser example Mozilla Firefox

Note: you can point your application to use port: 6053 for few selected app like gtalk etc. (in certain network it may not work)

The picture below shows how you will configure your browser

How do I know browse?

1. Connect your modem
2. then open your indian web or skye web
3. click on Start proxy and waite for <0KB> to show on the indian web proxy (IWP)
4. minimise the iwp
5. open your browser e.g mozilla firefox etc and start browsing

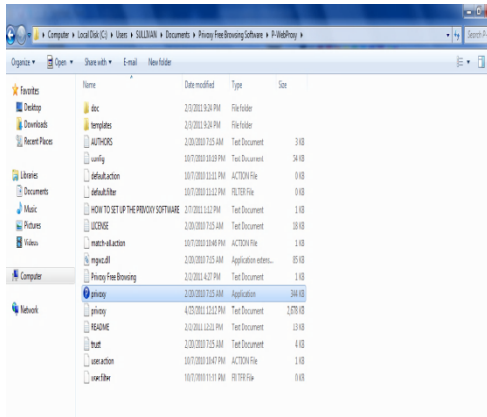

PRIVIOXY: Privoxy is tunneling software that enables you to surf the internet freely without much manipulation.

Download privoxy latest version from the link below

<http://www.softpedia.com/get/Security/Security-Related/Privoxy.shtml>

if the link is not going well for you, you can visit www.google.com, once it opens you type privoxy download to download the privoxy.

After download extract the privoxy, inside the extracted folder "p-web proxy", locate a blue-(p) icon, double click on the blue icon and minimize it, as shown here

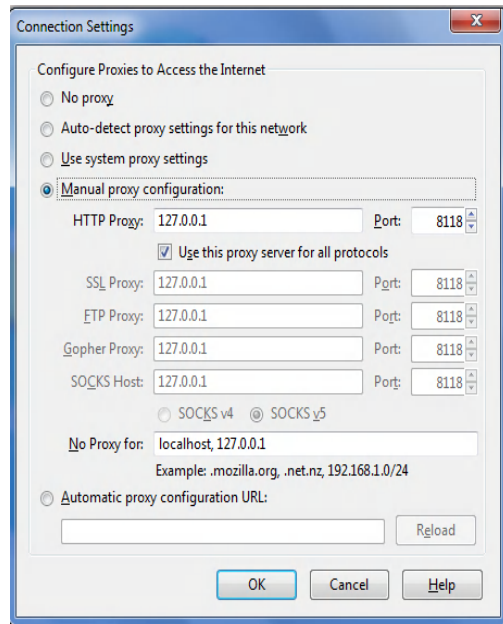

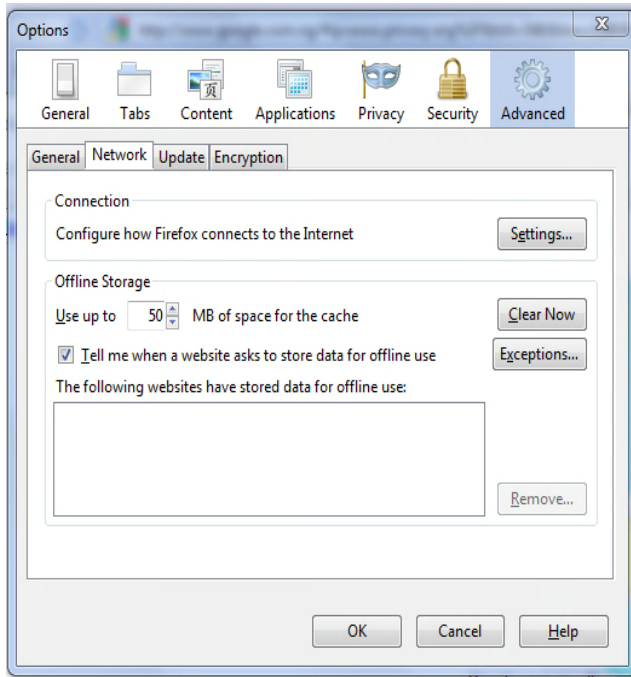

and then set your browser as follows:

For Mozilla, flock and comet bird browser: click on the option on the browser, locate tools

Click on option, click advance, network and settings.

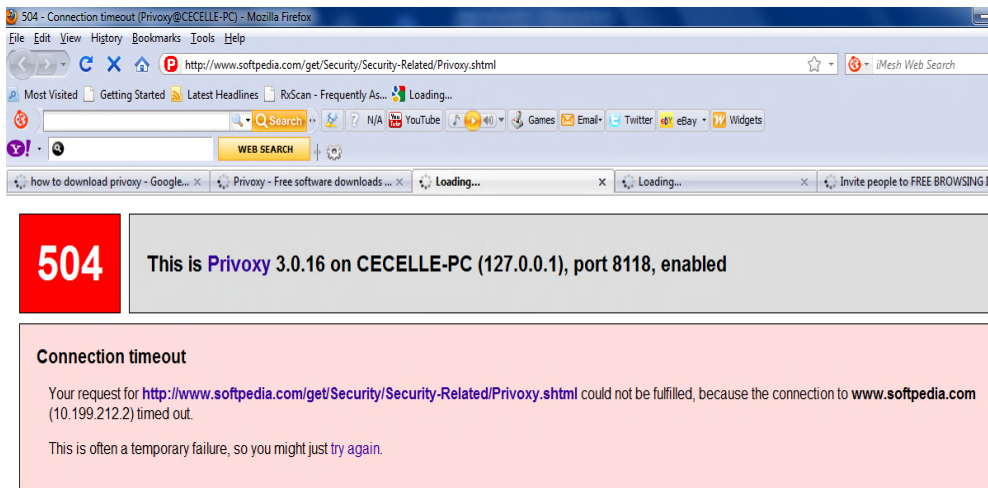

Select manual proxy configuration and type these settings: http: 127.0.0.1 port 8118

Tick use this proxy server for all protocol and click ok as shown in the picture below

How do I know browse? Connect your modem, then open your browser e.g mozilla firefox etc and start browsing

if an error message appears like the picture below just refresh the page .
